

This listing of claims will replace all prior versions, and listings, of claims in the application:

LISTING OF CLAIMS:

Claims 1-70 (Cancelled).

Claim 71. (New) A circuit interrupting device comprising:

a first electrical conductor adapted to electrically connect to a source of electric current;

a second electrical conductor

a third electrical conductor wherein the first, second, and third electrical conductors are electrically isolated in a first position and at least one of said conductors is movable to a second position for contacting at least one of said other conductors to provide electrical continuity therebetween, one of said second or third electrical conductors are connected to at least one user accessible receptacle;

a lifter having a first opening and configured to move the first conductor in a first direction for contacting at least one of the second and third conductors for permitting electrical continuity between the first conductor and the at least one of the second and third conductors and in a second direction for breaking electrical continuity between the first conductor and the least one of the second and third conductors;

a circuit interrupter configured to move the at least one movable bridge from the first position to the second position upon the occurrence of a predetermined electrical condition;

a reset arm configured to reorient the at least one movable bridge to the first position to reestablish electrical continuity amongst the conductors after resolution of the predetermined electrical condition; and

a latch configured to move the lifter between a first position and a second position and the latch having a second opening positioned to substantially align with the first opening of the lifter.
